

Hercules

THE STRENGTH LIES IN THE PERFORMANCE

IP 23 protected industrial reflector with stamped steel casing coated with polyester powder grey RAL 7035.

Possibility to increase the protection rating up to IP44 with the special optical compartment closing KITS offering the choice between glass and bowls in polycarbonate or high- modulus methacrylate.

The new standard dish can be added to the scored reflector made out of aluminium 99.85 polished and anodized, to ensure improved light distribution. Reflector retaining bands for maintenance.

Explosion-proof capacitor mounted on all versions with 400 W power. Also the entire range has power supply units with thermal protection in order to ensure better protection and a longer lifetime.

NEWS 

CHARACTERISTICS AND ADVANTAGES

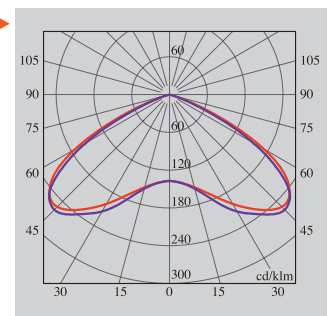

HERCULES CHANGES APPEARANCE WITH A REVAMP

The HERCULES family has been enriched with new versions. The standard dish with metallic effect graphite grey casing affords the product a more pleasant aesthetic appearance whilst maintaining high luminous efficiency. Corrosion protection guaranteed by special surface treatment carried out before painting with graphite grey powders.

PHOTOMETRIC PERFORMANCE

The new standard aluminium 99.85 dish polished and anodized comes guaranteed with improved photometrical performance and productivity of over 81%.

This optimum performance means a reduction in the demands on the industrial reflectors in comparison to the lightening output produced.

HERCULES RANGE

BETTER PROTECTION

The power supply unit in the 400 W versions is complete with explosion-proof capacitor and reactor with thermal protection so as to ensure maximum protection and extend the lifetime of the product as a

TRANSPARENT DISH

The prisms made on the new transparent dish offer perfect optical control in order to use the entire flow emitted by the lamp in the best way possible.

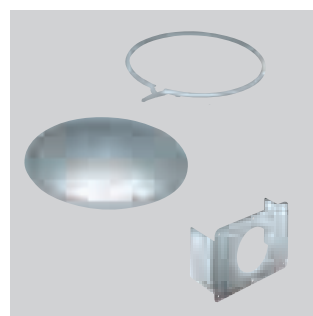

SIMPLIFIED MAINTENANCE

Thanks to the retaining chains, it is possible to perform maintenance of the wiring compartment quickly and safely. The handy bayonet opening is on three supports.

SUSPENSION RING

The suspension ring is large in size so that it can accommodate any fastening system (hook, spring catch, metal cord).

VERSATILITY

The possibility to increase the protection rating from IP 23 to IP 44 by using the special KITS. The KITS are available both with glass and with bowls in polycarbonate or in high-modulus methacrylate.
