

Point-Park

NEW DESIGN AND COLOURS

Lighting equipment for external residential areas with shielded optics.

Both products are available in two sizes and proposed only in versions for compact fluorescent lamps and limited loss magnetic power supply.

The technical aspect, plain shape and the new graphite grey colour of the casing make the products suitable for any installation context.

CHARACTERISTICS AND ADVANTAGES

CE

SHIELDING

The transparent diffuser contains the special prismatic antiglare louvre that converges and enhances the down light effect, while eliminating the luminous flux dispersed towards the sky.

Its two dimensions

UNIVERSAL PRODUCT

POINT is suitable for installation in any type of context, thanks to its stark and elegant look due to its new graphite grey finish. Therefore POINT meets a wide variety of aesthetic needs.

ENERGY-SAVING

The special inclined rectangular shape allows the luminous flux to be adjusted forwards by about 60° with respect to the floor. This enables optimal distribution of the flux.

Only the required areas are illuminated, thus offering a considerable reduction in the installed lighting points and consequent energy-saving.

UNIVERSAL PRODUCT

Small and rectangular in shape, it easily adapts to any setting. PARK is always up to date thanks to its neutral shape, unaffected by passing trends. The new graphite grey finish, moreover, gives it a more elegant look.
